Business analyst from the founding team of digiCMR, a B2B SaaS platform for electronic consignment notes (eCMR) in road freight. I gathered requirements, mapped workflows and tracked the document funnel. When I found that most documents stalled after the first step, I made completion rate the roadmap's central metric and designed the signing paths to fix it. A BSc in Informatics and a software development background (C#/.NET) mean I can read the codebase and pull production data myself.

Core Competencies

- **Analysis**: Requirements gathering, process mapping, funnel and drop-off analysis, metric definition, KPI tracking, root-cause analysis.
- **Product delivery**: Backlog ownership, Scrum (introduced and facilitated as Scrum Master), quality assurance, stakeholder management, customer discovery.
- **Data and tools**: SQL (working knowledge), Excel, Jira, Confluence, REST APIs and integrations, C#/.NET and Java (reading and writing code), AI-assisted analysis (Claude Code, Cursor); building Python and pandas skills (DataCamp, in progress).
- **Domain**: B2B SaaS, road freight, eCMR regulation and EU eFTI readiness, regulatory reporting and data retention.
- **Leadership**: Led a team of three and trained around 70 conscripts as a communications NCO.

Professional Experience

Estonian Defence Forces — **Estonia**
Communications NCO — *07/2025-06/2026*

- Completed the Non-Commissioned Officer course during 11 months of compulsory service.
- Led a team of three as communications NCO and trained around 70 conscripts in communications.
- Helped introduce new communications technology across the whole unit, onboarding and training both conscripts and active-duty personnel.

digiCMR (Ybil.io, spun off from ATV Transport AS) — **Tallinn, Estonia**
Business Analyst and acting Product Owner — *03/2023-06/2025*

- Gathered requirements from users in multiple roles and turned their workflows into specifications for developers.
- Led the product as acting Product Owner within the core team that spun it out as Ybil.io: set the product direction, owned the backlog, introduced Scrum and ran it as Scrum Master, and led quality assurance.
- Worked out the APIs and integrations with developers, and worked across sales, operations and legal to ship a product that gets logistics firms ready for the EU's eFTI rules.
- Tracked adoption across the product's life: 6,865 eCMRs issued, replacing an estimated 20,000+ paper sheets; monthly volume reached 378 in the final month against an average of about 136 across the final year.
- Identified the platform's core bottleneck (most documents stalled after the first step), quantified the gap between started and completed documents, and made completion rate the roadmap's central metric.
- Designed two low-friction signing paths to raise completion: an email or in-app link, and a QR code that needs no account.
- Defined how the platform meets the EU-wide eCMR reporting requirements while the regulation was still in draft: registered events, document data and retention periods.
- Queried production data with SQL to answer questions from sales, operations and management; documented decisions in Confluence.

- **Softwerk**
  Junior Software Developer *09/2021-07/2022*
  - Built and maintained web features in C# (.NET, Blazor), gaining hands-on knowledge of how systems store and expose data.

Education

- **Tallinn University of Technology (TalTech)** **Tallinn, Estonia**
  BSc in Informatics *2019-2024*

- **TalTech (professional course)**
  From Junior to Senior Software Developer *2026*
  Completed during military service.

- **DataCamp**
  Associate Data Scientist in Python *In progress*
  Career track, in progress.

Languages

- Estonian (native), English (C1).
